

TECHWELL Digital Awareness

→ Programme's Türkiye Phase Completed

The Türkiye phase has been completed for the TechWell project, supported by the Ministry of Industry and Technology. The programme, which lasted during January, focused on digital literacy, social media ethics, and conscious technology use. Over the course of the training, participants engaged in various interactive workshops and practical sessions to enhance their digital skills and awareness.

The Türkiye phase aimed to provide young people with the necessary tools to navigate the digital world safely and responsibly. Throughout the programme, students learned about the risks and opportunities of the digital age and developed strategies for a healthier digital life.

Impact and Future Steps:

→ Building a Digitally Resilient Generation

Being digitally resilient is a core value of the TechWell project. The programme has equipped participants with the knowledge and skills needed to face digital challenges and make informed decisions online.

Looking ahead, the project aims to expand its reach and continue supporting young people in their digital journeys. The success of the Türkiye phase is a testament to the importance of digital awareness and the positive impact it can have on individuals and communities.

We are proud of the progress made during this phase and look forward to the future steps of the TechWell project as we continue to empower the next generation of digital citizens.
